What you need to know about fentanyl.

- Fentanyl is a powerful, fast-acting opioid used to manage pain in medical settings.
- Unregulated (illicit) fentanyl is a street drug, often sold as fake prescription pills, powder, and liquid, and can't be identified by look, smell, or taste.
- Because fentanyl is strong and cheap to produce, people who manufacture illegal drugs use fentanyl to make their drugs more powerful and less expensive to manufacture.
- It is possible for someone to take a pill without knowing it contains fentanyl. It is also possible to take a pill knowing it contains fentanyl, but with no way of knowing if it contains a lethal dose.

Hiding in fake pills, FENTANYL is tasteless, odorless and is deadly in sizes as small as two grains of salt.

Never take pills not prescribed to you.
